An accessibility specialist leveraging a background in software engineering with music technology skills to bring a unique perspective to collaborative projects. Recognized as proactive, resourceful, and a persistent problem-solver. Excellent communicator who is detail-oriented, organized, and passionate about learning from and teaching others.

ACCESSIBILITY ENGINEERING EXPERIENCE

Soomo Learning | Remote, OR | May 2023 - Present *Digital Accessibility Coordinator*

- Assess digital textbooks and feature updates on desktop and mobile app for WCAG 2.2 Level AA, Section 508, and Title II compliance, documenting accessibility issues in order to make remediation and best practice recommendations to the development team
- Perform thorough accessibility testing of digital textbooks and PDFs on desktop, iOS, and Android using screen readers like VoiceOver, JAWS, NVDA, and Narrator combined with automated tools, improving our internal documentation and help center articles for accessible tech users and maintaining our Accessibility Conformance Report data
- Research and maintain up to date information on accessibility standards and guidelines, keeping the editorial team informed on best accessibility practices for HTML and PDFs and answering questions about accessibility requirements
- Respond to accessibility questions from students, instructors, and school staff, providing training on using accessible technology with the digital textbook on desktop and mobile and reporting necessary bug fixes when applicable

Lyft | San Francisco, CA | June 2022 - Dec 2022 *Software Engineer*

- Developed and maintained the code base for Lyft's new hire mentorship program, ensuring security of sensitive information, providing 1:1 mentorship for over 90% of technical new hires
- Tested onboarding applications and curriculum for accessibility standards, including effective use of various screen readers like JAWS, NVDA, and Google built in text to speech technology
- Maintained up-to-date knowledge and expertise in Python, JavaScript, SQL and coding libraries such as Flask to effectively monitor the new hire support channel by debugging code and troubleshooting errors to ensure the success of ~50+ new engineers weekly
- Designed and implemented a markdown link checking tool using Python to increase accuracy of tech onboarding materials, automating manual team tasks
- Revamped interactive Python, Flask and Blueprint route curriculum for the tech onboarding program by managing pull requests, issues, and bug fixes which reduced the average time to first deployment for new hires by ~3 days

UC Berkeley | Berkeley, CA | Oct 2021 - Apr 2022 *Full Stack Web Development Bootcamp*

- Served as full stack developer on a 4 person team to create a dating/chat web application Randm; established the REST API in Express.js, aided in the MySQL database creation using Sequelize, and developed the front end functionality with JavaScript and HTML
- Implemented Node.js backend in browser based game Happy Harvesters on a team of 8 engineers;

established GraphQL API with Apollo server, set up MondoDB database utilizing the Mongoose ORM, and executed user authentication with JSON web tokens and bcrypt encryption; provided front end support in React to simplify page navigation and manage game state

- Designed and developed a music tech blog called Making Waves independently; built CRUD functionality in Node.js / Express.js using MySQL database, designed the front end using CSS, Handlebars, and Foundation, wrote frontend logic in JavaScript, deployed application to Heroku
- Worked on 3 person project Koality of Life, an application that utilizes an external API so users can compare quality of living in multiple cities; I designed the user interface using HTML, CSS, and Foundation, created front end functionality using jQuery, and reviewed team pull requests in GitHub

Lane Community College | Eugene, OR | Oct 2015 - Feb 2022

Lead Technology Specialist, Student Health & Wellness Center Jan 2021 - Feb 2022

- Created and maintained all department website pages while ensuring compliance with changing WCAG accessibility standards in order to provide equitable access to college resource
- Performed rigorous manual testing of assistive technologies used for motor, visual, hearing impairments as well as software compatibility testing with programs such as ABBY Finereader, JAWS, and NVDA
- Developed user-friendly google script applications to organize and streamline processes, procedures, and data collection in order to secure grant funding for services
- Provided technology and administrative support and training for 100+ staff, faculty, and students on departmental hardware and software to fulfill accommodation requests and increase awareness of resources

Lead Project Coordinator, Disability Resources Nov 2019 - Jan 2021

- Researched assistive technology, installed and tested for student use; led in the implementation of eye tracking technology to expand resource availability to students with highly limited mobility
- Spearheaded the development and use of JavaScript applications that simplified department procedures, data reports, and other systems to increase efficiency and enhance student services
- Led department staff in new data collection project and delivered findings and recommendations for improvement to executive team which resulted in a 10% increase in successful student accommodations processing
- Managed communication across multiple departments to plan Mental Health Awareness Month events, presentations, and advertisements which increased community awareness and strengthened program investment among internal and external benefactors

Assistant Music Lab Coordinator October 2015 - November 2019

- Maintained and serviced music and information technology hardware and software that served 100+ students, staff, and faculty daily which increased student success and retention by ~30%
- Reviewed course curriculum and recommended updates based on latest trends in technology in order to provide accurate and up to date course material to over 150 students across multiple courses
- Responded promptly to the needs of facility users by troubleshooting a variety of specialized hardware and software related to audio engineering, music production, and educational advancement
